

Dutair bare shaft blowers are versatile units for pressure and vacuum. They are made of robust aluminium and work without contact, resulting in maintenance free operation. A set of silencers is integrated in the construction.

They can be driven by hydraulic or electric motors and combustible engines, using an elastic coupling or a belt drive. The maximum ambient temperature is 40°C and the rotation speed is limited to 4500 rpm. For values of maximum pressure and vacuum at rotation speeds other than shown please consult the manufacturer.
